# Activity_Course 2 Automatidata project lab

March 5, 2024

## 1 Automatidata project

**Course 2 - Get Started with Python**

Welcome to the Automatidata Project!

You have just started as a data professional in a fictional data consulting firm, Automatidata. Their client, the New York City Taxi and Limousine Commission (New York City TLC), has hired the Automatidata team for its reputation in helping their clients develop data-based solutions.

The team is still in the early stages of the project. Previously, you were asked to complete a project proposal by your supervisor, DeShawn Washington. You have received notice that your project proposal has been approved and that New York City TLC has given the Automatidata team access to their data. To get clear insights, New York TLC's data must be analyzed, key variables identified, and the dataset ensured it is ready for analysis.

A notebook was structured and prepared to help you in this project. Please complete the following questions.

## 2 Course 2 End-of-course project: Inspect and analyze data

In this activity, you will examine data provided and prepare it for analysis. This activity will help ensure the information is,

1. Ready to answer questions and yield insights
2. Ready for visualizations
3. Ready for future hypothesis testing and statistical methods

**The purpose** of this project is to investigate and understand the data provided.

**The goal** is to use a dataframe contructed within Python, perform a cursory inspection of the provided dataset, and inform team members of your findings.
*This activity has three parts:*

**Part 1:** Understand the situation * Prepare to understand and organize the provided taxi cab dataset and information.

**Part 2:** Understand the data

- Create a pandas dataframe for data learning, future exploratory data analysis (EDA), and statistical activities.
- Compile summary information about the data to inform next steps.

**Part 3:** Understand the variables

- Use insights from your examination of the summary data to guide deeper investigation into specific variables.

Follow the instructions and answer the following questions to complete the activity. Then, you will complete an Executive Summary using the questions listed on the PACE Strategy Document.

Be sure to complete this activity before moving on. The next course item will provide you with a completed exemplar to compare to your own work.

# 3 Identify data types and relevant variables using Python

# 4 PACE stages

Throughout these project notebooks, you'll see references to the problem-solving framework PACE. The following notebook components are labeled with the respective PACE stage: Plan, Analyze, Construct, and Execute.

## 4.1 PACE: Plan

Consider the questions in your PACE Strategy Document and those below to craft your response:

### 4.1.1 Task 1. Understand the situation

- How can you best prepare to understand and organize the provided taxi cab information?

==> Start by reviewing the NumPy and pandas libraries, and the various methods and attributes it offers. Making sure to use the appropriate functionalities of these libraries at appropriate places.

## 4.2 PACE: Analyze

Consider the questions in your PACE Strategy Document to reflect on the Analyze stage.

### 4.2.1 Task 2a. Build dataframe

Create a pandas dataframe for data learning, and future exploratory data analysis (EDA) and statistical activities.

**Code the following,**

- import pandas as `pd`. pandas is used for buidling dataframes.

- import numpy as `np`. numpy is imported with pandas
- `df = pd.read_csv('Datasets\NYC taxi data.csv')`

**Note:** pair the data object name `df` with pandas functions to manipulate data, such as `df.groupby()`.

**Note:** As shown in this cell, the dataset has been automatically loaded in for you. You do not need to download the .csv file, or provide more code, in order to access the dataset and proceed with this lab. Please continue with this activity by completing the following instructions.

[1]:
```
#Import libraries and packages listed above
### YOUR CODE HERE ###
import pandas as pd
import numpy as np
# Load dataset into dataframe
df = pd.read_csv('2017_Yellow_Taxi_Trip_Data.csv')
print("done")
```

```
done
```

### 4.2.2 Task 2b. Understand the data - Inspect the data

View and inspect summary information about the dataframe by coding the following:

1. `df.head(10)`
2. `df.info()`
3. `df.describe()`

Consider the following two questions:

**Question 1:** When reviewing the `df.info()` output, what do you notice about the different variables? Are there any null values? Are all of the variables numeric? Does anything else stand out?

**Question 2:** When reviewing the `df.describe()` output, what do you notice about the distributions of each variable? Are there any questionable values?

==> Answer 1: There aren't any null values. There are 8 float type columns, 7 int type columns and 3 object type columns. There is a column called 'Unmamed: 0'. ==> Answer 2: The 'Unmamed: 0' column has a different count value. Minimum of fare_amount, extra, mta_tax, improvement_subcharge and total_amount is negative.

[2]:
```
#==> ENTER YOUR CODE HERE
df.head(10)
```

#### 4.2.3 Task 2c. Understand the data - Investigate the variables

Sort and interpret the data table for two variables:`trip_distance` and `total_amount`.

**Answer the following three questions:**

**Question 1:** Sort your first variable (`trip_distance`) from maximum to minimum value, do the values seem normal?

**Question 2:** Sort by your second variable (`total_amount`), are any values unusual?

**Question 3:** Are the resulting rows similar for both sorts? Why or why not?

==> Answer 1: Yes. ==> Answer 2: No. ==> Answer 3: No, because it is not necessary for the most expensive ride to be the longest.

[5]:
```
# ==> ENTER YOUR CODE HERE
trip_distance_sort = df.sort_values(by = ['trip_distance'], ascending=False)
trip_distance_sort.head(20)
# Sort the data by trip distance from maximum to minimum value
```

### 4.3 PACE: Construct

**Note**: The Construct stage does not apply to this workflow. The PACE framework can be adapted to fit the specific requirements of any project.

### 4.4 PACE: Execute

Consider the questions in your PACE Strategy Document and those below to craft your response.

#### 4.4.1 Given your efforts, what can you summarize for DeShawn and the data team?

*Note for Learners: Your notebook should contain data that can address Luana's requests. Which two variables are most helpful for building a predictive model for the client: NYC TLC?*

==> total_amount and trip_distance will be the two most helpful variables to build a predictive model.

**Congratulations!** You've completed this lab. However, you may not notice a green check mark next to this item on Coursera's platform. Please continue your progress regardless of the check mark. Just click on the "save" icon at the top of this notebook to ensure your work has been logged.
